EG21 and EGS21 Series Electric Gage and Swichgage® Installation for Pressure, Temperature, Fuel Level, Voltmeter and Ammeter

IMPORTANT NOTICE FOR ALL EG21 ELECTRIC GAGES AND EGS21 ELECTRIC SWICHGAGES FOR 24VDC AND 32VDC APPLICATIONS

A change in the dial illumination circuit has made it necessary to change the external wiring harness. If you use the incorrect wiring harness, irreparable damage will occur to the gage mechanism.

The table below lists correct wire harness assemblies for units by manufacturing date. For date code R1 (January 1996) or earlier (Q12, Q11, etc.) the wire harness can be identified by P/N and by BLACK shrink tubing on the YELLOW wire. For date code R1 (February 1996) and later (R3, R4, etc.) the wire harness can be identified by P/N and by RED shrink tubing on the YELLOW wire.

<table>
<thead>
<tr>
<th>Date Code R1 or Earlier</th>
<th>Date Code R2 or Later</th>
</tr>
</thead>
<tbody>
<tr>
<td>05004546</td>
<td>05006166</td>
</tr>
<tr>
<td>05004547</td>
<td>05006167</td>
</tr>
<tr>
<td>05004548</td>
<td>05006168</td>
</tr>
<tr>
<td>05004549</td>
<td>05006169</td>
</tr>
<tr>
<td>05004550</td>
<td>05006170</td>
</tr>
<tr>
<td>05004551</td>
<td>05006171</td>
</tr>
<tr>
<td>05004552</td>
<td>05006172</td>
</tr>
</tbody>
</table>

If dial illumination is NOT required, either wire harness can be used on any date code, if the YELLOW wire is NOT connected.

Wire/Connector Assembly

NOTE: EG21 Series gage and EGS21 Series Swichgage movement and illumination require 12VDC to function. For 24 or 32 volt systems, voltage converters are built into the electrical wire/connector assembly and supplied with instrument.

Listed below are replacement part numbers for all wire/connector assemblies. Voltage converter included for 24 and 32 volt. Specify part number when ordering.

</tr>
</tbody>
</table>

* For gages with date code R1 (January 1996) or earlier (Q12, Q11, etc.,) specify part number shown in parenthesis.

Gage Installation
Sender Installation

**CAUTION:** Do not use sender body to tighten. If sealant tape or pipe dope is used on the pressure sender, be sure that the tape or dope does not plug the sender’s orifice.

**Pressure Sender**

**Temperature Sender**

**CAUTION:** Extreme caution must be used in handling or working on or around the fuel tank. It must be worked on only in a WELL VENTILATED area. Keep all flame and hot materials away from it. Do not smoke while working on or around the tank. Avoid sliding or dragging the tank, or other actions which may cause a spark.

**Fuel Level Sender**

**Tank Installation**

**NOTE:** When installing the fuel sender in a non-metallic tank using a single wire sender, another wire must be added from one of the sender mounting bolts to the battery ground (negative post). See 1 in the ‘Tank Installation’ illustration above.

---

**Warranty** - A limited warranty on materials and workmanship is given with this FW Murphy product. A copy of the warranty may be viewed or printed by going to www.fwmurphy.com/support/warranty.htm
**Basic Wiring**

**WARNING:** Disconnect battery negative cable before wiring or service.

### Pressure, Temperature, Fuel Level and Voltmeter Gage

![Diagram of Pressure, Temperature, Fuel Level and Voltmeter Gage]

*Yellow wire is optional for gage illumination and does not need to be connected for gage to operate.

### Sender Wiring

**Grounded Sender**

![Diagram of Grounded Sender]

**Ungrounded Sender**

![Diagram of Ungrounded Sender]

**Dual Gages with Dual Gage Sender**

![Diagram of Dual Gages with Dual Gage Sender]

### Swichgage Wiring

**WARNING:** DISCONNECT BATTERY NEGATIVE CABLE BEFORE WIRING OR SERVICE.

**CAUTION:** Connecting full Battery potential to the brown wire can damage the Swichgage. Shutdown circuit is rated for 300 mA continuous, 900 mA inrush. Circuit rounds out at set point.

**Warranty** - A limited warranty on materials and workmanship is given with this FW Murphy product. A copy of the warranty may be viewed or printed by going to www.fwmurphy.com/support/warranty.htm
CAUTION: Devices containing solid state components can be damaged or caused to malfunction when used in systems which incorporate inductive loads (e.g. relays, solenoids, etc.) that can generate voltage spikes.

To reduce the potential for this type of damage, install a flyback or clamping diode across all inductive loads (see wiring diagram below).

Use Murphy diode package 65-00-0343 or equivalent. A typical diode is 1N4005 which is readily available from commercial sources. Failures of this type are not covered by our Limited Warranty.

*Model 518APH is the only Murphy recommended TattleTale® for use with the EGS21 series Electric SWICHGAGE®.
